PROFILE

Developer with 5+ years of experience, specialized in Android and Web platforms. I love creating software to solve real-world needs trough constant communication with users and businesses to achieve and exceed product expectations.

I consider myself a Generalist ,product-focused developer, having experience that ranges from low-level devices, servers, mobile and web interfaces, I constantly look for the right tool for the job rather to attach to a single tool or platform.

EMPLOYMENT HISTORY

Android/Web Developer at Tapadoo, Dublin

May 2022 — Present

Day-to-day responsibilities:

- Developed and maintained old and new Android applications, ensuring high performance and responsiveness.
- Conducted code reviews, presentations and provided mentorship to junior developers and cross-skilling developers.
- Utilized Agile methodologies for project management and delivery.

Highlights:

- Lead initiatives to improve products, collaborated with cross-functional teams to define, design, and ship new features.
- Improved internal workflows for developers, project managers and testers
- Gave talks representing the company in developer conferences and other expos.

Freelance Web Developer, Puebla

January 2022 — May 2022

- Collaborated with clients to establish requirements and expectations.
- Collaborated in the process of Wireframe to establish product functionality and flow.
- Designed and developed final responsive and accessible site.

Full-stack Developer at Accesa, Puebla

December 2020 — January 2022

Day-to-day responsibilities:

- Developed and maintained software focused on IoT devices using real-time protocols for data visualization and device management.
- Collaborated closely with users to deliver products tailored for their use case.
- Led troubleshooting efforts to resolve software and hardware issues.

Highlights:

- Lead the prototype and creation of a new company service in collaboration with developers, designers and clients.
- The developed service could be self-hosted or hosted in the cloud, allowing versatility for mission-critical software and a SASS model.
